NOTE 1) The concept of “approval” or “rejection” does not apply to letter ballots issued by a coordinating liaison organization as discussed in milestones 4 and 5, this voting table, and in the X3/SD-3. The results of such letter ballots, submitted with the dpANS to OMC and X3, are used only as an indication that there are conflicts or lack of conflict between the draft standard and standards under development elsewhere within the X3 arena.

NOTE 2) A study project approved by OMC or LRPC and carried out in a Study Group or a TC is a fact-finding, rather than a standards-writing, operation. Therefore, while a vote is taken to forward the study results to OMC or LRPC and suggested project proposals to either OMC (in the case of a Study Group) or the TC (in the case of a study project so assigned by OMC), the vote is advisory in nature and the concept of “approval” or “disapproval” does not apply. However, it is important that dissenting opinions be documented and included with the study report or project proposal submitted.

NOTE 3) There is no concept of “approval” or “disapproval” in this case. Letter ballot results are advisory to OMC in carrying out their officer appointment responsibilities.
