

To: ATA ad hoc Working Group
From: Pete McLean, Maxtor Corporation
Date: 26 February 1996
Subj: Use of pins A-D On 44-pin connector

This revision of this document reflects the agreement of the working group at the February 21-23 meeting after reviewing the Maxtor, IBM, and Toshiba proposals.

In Annex A, add the following subclause.

A.2.2 Use of pins A-D for device selection

If a device uses pins A, B, C, and D for device selection, it is recommended that when no jumper is present the device is designated as Device 0. It is recommended that when a jumper is present between pins B and D, the device is to respond to the CSEL signal to determine its device number.
